

RELEASE NOTES

November 2024

LEPIDE DATA SECURITY PLATFORM 24.3

1. New Features

Feature	Description
Permissions Management	<p>Lepide now enables users to develop and implement a new permission management system for their organizations. The new system will allow users to easily and efficiently manage permissions over all the shared locations.</p> <p>Users will be able to define and control who has access to what resources. This is a vital part of any organization's security strategy, as it helps to protect sensitive data and systems from unauthorized access.</p>
Lepide IQ	<p>Lepide IQ is our AI helper, that enables users to generate brief summaries of reports, without the need to generate full reports. This enables users to quickly grasp the key insights within the reports without having to go through extensive details.</p>
Nasuni Auditing	<p>Lepide now supports auditing for Nasuni File server, including all modifications being made to files and folders.</p>

2. Enhancements

Feature	Description
Improvements and bug fixes	<p>Improvements have been made to functionality, including the data discovery and classification module. Minor bug fixes to functionality have also been included in the release.</p>
