# Lepide

Nasuni File Servers

Lepide Auditor for Nasuni File Servers provides users with the means to audit file and folder modifications across Nasuni environments. This will provide better visibility into any changes made to critical files, bolstering security, and ensuring regulatory compliance.

Nasuni security and compliance.

Nasuni auditing provides a detailed record of who accessed, modified, or deleted files. This helps identify potential security breaches, unauthorized access, or data manipulation. It also assists in meeting compliance requirements (e.g., HIPAA, GDPR) by demonstrating responsible data handling practices.

Simple incident investigations.

If a security incident occurs, audit logs are crucial for investigating the root cause and determining the extent of the damage. Lepide can help pinpoint the source of the incident, identify affected files, and track the actions of malicious actors with detailed Nasuni file auditing.

Report
