

Nutanix Security

Lepide's Nutanix file auditing solution delivers greater visibility into file activity within Nutanix file server environments with detailed file auditing and monitoring.

Audit all file and folder modifications across Nutanix environments using the Lepide Auditor for Nutanix File Servers. Gain visibility into all modifications made to critical files, to strengthen security and meet compliance standards.

Comprehensive Nutanix auditing and reporting.

The Nutanix Auditing Solutions provides pre-defined auditing reports with complete visibility over user activity answering the auditing questions of who, what, where and when modifications occurred. This helps to identify anything suspicious by showing you when files and folders are created, accessed, changed, moved, renamed, copied or deleted. You can then take remedial action to mitigate data risk and meet compliance requirements (e.g. HIPAA, GDPR).

Track Nutanix permission changes.

In order to maintain a least privileged environment, you need to understand how your permissions are changing, and whether users are getting access to sensitive information. Lepide enables you to spot permission changes in real time to make your access control investigations simple and quick.

Report
Report Name - All Permission Changes

Filters : Server Name : [Equals [All]]
Home / Lepide Auditor / Reports / Nutanix / All Permission Changes

When	Who	Object Name	Operation
